

GEO 447 PRINCIPLES OF GIS

- What is GIS?
 - Acronym
 - define GIS(ystems)
- The History of GIS
 - Multiple Themes
 - Computers
 - Key Institutions & Developments

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

Acronym

- GIS = geographic(al) information system
 - the hardware, software, & routines
- GIS = geographic(al) information science
 - philosophical questions
 - methods issues
- Why does it matter?
 - Discipline specific implications
 - software versus science

GEO 447 PRINCIPLES OF GIS

A GIS. . .

- Is a subset of information science that deals with spatially or geographically referenced data.
- Is a collection of hardware, software, methods, and instructions, to:
 - capture, manage, manipulate, analyze, & display
- Is a decision support system
- Is different from mapping & computer aid-cartography because of its analytical capacity
- Is different from CAD programs because it performs spatial operations
- Is different from DBMS because it has a cartographic interface

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

GIS: An Inter-Disciplinary Science

- Geography
- Cartography
- Photogrammetry
- Remote Sensing
- Geology
- Geodesy
- Surveying
- Statistics
- MIS
- Computer Science
- Mathematics
- Civil Engineering

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

Similar & Synonymous Software Applications/Terms

- AGIS (Automated Geographic Information System),
- AM/FM (Automated Mapping and Facilities Management)
- CAD/M (Computer-Aided Drafting/Mapping or Manufacturing)
- Environmental Information System
- Image-Based Information System
- LIS (Land Information System)
- Land Management System
- Land Record System
- Land Resources Information System
- Natural Resources Inventory System
- Natural Resources Management Information System
- Planning Information System

- Multipurpose Cadastre
- Resource Information System

- Spatial Data Handling System

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Multiple Themes

- Maps are efficient data storage devices--but inefficient analysis tools
- Pre-GIS spatial analysis was limited to ‘multiple’ themes
 - rough overlays
 - eyeballing data
 - imperfect method
 - Accounting for scale difference?
 - Data sources?
 - Quantification of an overlay?

GEO 447 PRINCIPLES OF GIS

Famous Examples of Overlay

Source: University of British Columbia NCGIA Core Curriculum Project

- Maps of the Battle of Yorktown (American Revolution) contained hinged overlays to show troop movements
- A mid-19th Century Irish Railway Atlas showed population, traffic flow, geology and topography superimposed on the same base map
- Dr. John Snow used a map to track the source of Cholera outbreak to a contaminated well - an early example of geographical analysis

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Computers

- Computer hardware developed the capacity to provide cartographic output
- Computer systems became more robust in terms of speed & memory
- Computers become smaller & cheaper

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Computer Events

- Late 1950s, Transportation planners begin digitizing flow & traffic data
 - mapping
- Late 1950s, University of Washington Geography students begin quantitative revolution which includes developing spatial statistics, analytical operations & computer-aid mapping
 - heavy on spatial operations & mapping

GEO 447 PRINCIPLES OF GIS

History: Administrative/Government

- Mid 1960s, Canadian Geographic Information System developed to inventory land and resources, as well as rate habitats
 - Conceptual Innovations
 - database structure
 - overlay/area calculations
 - vectorization
 - layers
 - differentiating spatial & attribute
 - Technical Innovations
 - scanning as data entry
 - query polygons

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Administrative/Government

- Minnesota Office of Planning: Land Management Information System
 - like CGIS

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Administrative/Government

- U.S. Census
 - development of digital enumeration districts (1960s)
 - Geocoding for address matching
 - Geographic base files using Dual Independent Map Encoding (DIME) files developed for 1970 census
 - DIME files were urban only pre-cursors to TIGER
 - Creation of popular Urban Census Atlas were a by-product of DIME

GEO 447 PRINCIPLES OF GIS

History: Military/Government

- U.S. military was developing raster-based capabilities associated with satellite imagery & air photo
 - The popular and freely distributed package GRASS developed by Army Corps of Engineers is an example
 - Today, the on-going development of GRASS software is a collaborative project between public and private sector users, as well as university-based researchers.
 - Military developments has slowly made it to the commercial market

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ystems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Education

- Harvard Laboratory For Computer Graphics And Spatial Analysis (a.k.a. Harvard Graphics)
 - developed numerous software packages
 - SYMAP (1964)
 - CALFORM (late 1960s)
 - SYMVU (late 1960s)
 - GRID (late 1960s)
 - POLYVRT (early 1970s)
 - ODYSSEY (mid 1970s)

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(systems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Commercial

- Environmental Systems Research Institute (ESRI) created in 1969
 - Jack Dangermond built on Harvard Graphics developments
 - overtime, ESRI built on the successes of many other software companies it purchased and/or hire away their staff
 - By the 1980s, ESRI had created a standard RDMS-based structure
 - the integrated cartographic (arc) & RDMS (info) system was to be called Arc/Info

Created by JDG 2000

Class slides are based on readings, the current NCGIA Core Curriculum for GIS(ytems) and GIS(cience), Kemp & Goodchild (1991), the NCGIA Core Curriculum Project at UBC, and Foote & Heubner's *The Geographer's Craft*

GEO 447 PRINCIPLES OF GIS

History: Commercial

- Intergraph Corporation
 - Closely associated with federal contracts, particularly defense
 - A spin-off of former IBM Federal Systems Division employees working on NASA/USAF Saturn Rocket-development in Huntsville, AL
 - Initially, CAD--but developed into a GIS

GEO 447 PRINCIPLES OF GIS

History: Commercial, Government, & Education

- Contemporary development is driven by commercial sector
- De-classification of military applications & data leading to proliferation of GIS
- University-based development limited
- Commercial sector continues to consolidate. ESRI is the single most prominent GIS provider
- Government Agencies taking the lead on data standardization, decreased redundancy, and data sharing
